

SAP Signavio Process Intelligence

SiGNAL – Exercise Sheet

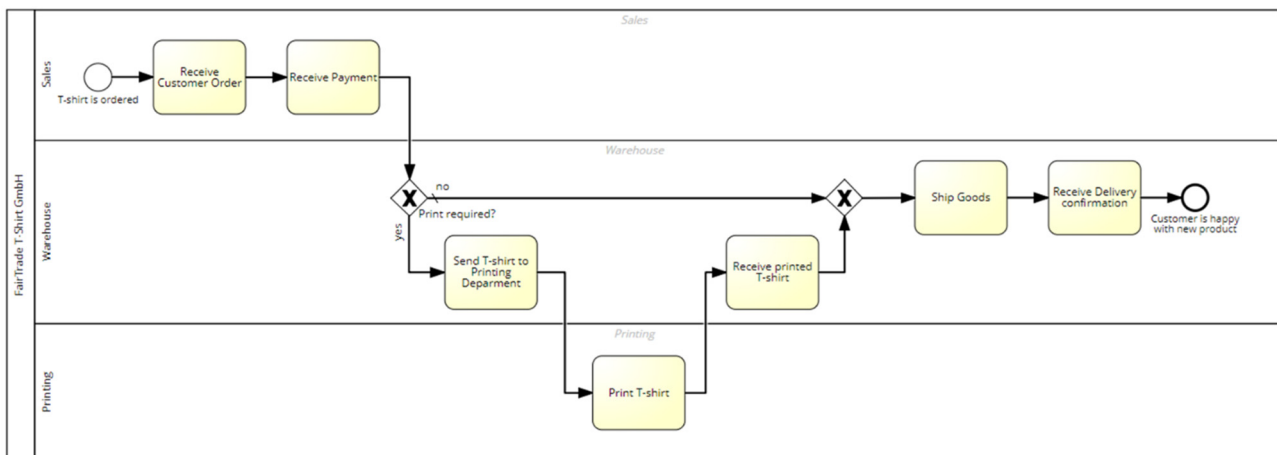

The following exercises will guide you through the functionality of the SiGNAL syntax and provide you an introduction to the most important functions and use cases.

All exercises should be answered by creating the SiGNAL queries.

TRAINING PROCESS / CASE STUDY

The process is based on a simplified Order-to-Cash scenario of an international company, which sells high quality fair-trade T-shirts with prints on it. The customer can either order a pre-printed shirt from the online shop or can decide for a custom print. In both cases, a prepayment is required before the order gets shipped.

Available Events

- ☐ Receive Customer Order
- ☐ Receive Payment
- ☐ Send T-shirt to Printing
- ☐ T-shirt Printed
- ☐ Receive T-shirt from Printing
- ☐ Ship Goods Express
- ☐ Ship Goods Standard
- ☐ Receive Delivery Confirmation
- ☐ Case ID
- ☐ Customer ID
- ☐ Order Canceled

Available Attributes

- ☐ Order Amount in EUR
- ☐ Order Status (Delivered | Canceled)
- ☐ Payment Type (Credit Card | Bank Transfer)
- ☐ Type of Goods (T-shirt | T-shirt with Print)
- ☐ Customer Type (Standard | Premium)
- ☐ City (Houston/New York/San Francisco/Miami/Boston)
- ☐ End time (Event Attribute)

1

ORDER & CUSTOMER STATISTICS

Create a new chapter **Order Statistics**. Create SiGNAL queries, which deliver the result to the following questions:

1. What's the total order amount of all cases?
2. What's the average order amount of all cases?
3. What's the average order amount from standard customers?
4. What's the average order amount from premium customers?
5. Which city has the most orders, split by Type of Goods? Show it in a stacked bar chart.
6. **BONUS**: How many customers have placed an order?

Please choose a proper naming for the widgets and set a unit where necessary.

2

CUSTOMER STATISTICS

Add SiGNAL queries (within the same chapter as above), which deliver the result to the following questions:

Add SiGNAL queries, which deliver the result to the following questions:

7. Which are the top 5 customers (customer ID's) and what's their average order amount? Use a SiGNAL Table.
8. How many of them are Premium customers?

3

CYCLE TIME

Create a new chapter **Cycle Time**. Use and create SiGNAL queries, which deliver the result to the following questions:

9. What is the average cycle time?
10. Which are the top 5 cases with low cycle time?
Create a SiGNAL Table with Case ID, Customer Type, Type of Goods, City and Cycle Time
11. **BONUS**: What is the average duration for printing?
12. **BONUS**: What percentage of cases are above the Target cycle time of 10 days?

4

COMPLIANCE

Create a new chapter **Compliance**. Use and create SiGNAL queries, which deliver the result to the following questions:

13. How often did the shipment fail per city? Use a pie chart!
14. How many T-shirt orders have been canceled after they got an individual print?
15. **BONUS**: What's their share compared to all cases in percent?
16. **BONUS**: What percentage of cases follow the standard process?
 - o (Order, Payment, (Printing), Shipping, Confirmation)
